

AI SMART KIDS

Ujjain's First AI Institute for Kids

Junior Track Curriculum Guide • Ages 9–12 • 12 Weeks

Your child already lives in a world of screens. Our 12-week Junior program turns that screen time into real, future-ready skill — where children stop just consuming content and start creating with AI: their own art, characters, stories and films.

Every week is hands-on and project-based. Children work with leading AI platforms — including ChatGPT, Google Gemini and Canva — always guided live by the instructor, always age-appropriate, and always building toward something they can proudly show you.

12 Weeks
structured program

3–4
classes per week

12 Seats
per batch only

100% Hands-on
project based

JUNIOR TRACK • AGES 9–12 — "The Young AI Creator"

A creativity-first journey. Juniors learn AI the way children learn best — by making things they love.

PHASE 1 • WEEKS 1–3 Hello, AI! — The Explorer Phase

Children meet AI for the first time — and discover they can create with it.

- Understand what AI is (and isn't) through fun, live experiments
- Design their own digital avatar and original characters
- Bring imaginary creatures and heroes to life with AI art
- Learn to give AI clear, creative instructions

★ **WOW moment:** Your child comes home with their own AI-created character — made entirely by them.

PHASE 2 • WEEKS 4–6 The Design Studio Phase

From playing with AI to designing with it.

- Create posters, logos and stunning visual designs
- Learn how professionals combine words, images and style
- Design an entire "City of the Future" — their own imagined world
- Develop taste: judging good design from bad

★ **WOW moment:** A gallery-ready design portfolio your child built from scratch.

PHASE 3 • WEEKS 7-9 The Storyteller & Filmmaker Phase

Now their creations start to move and speak.

- Write and illustrate their own comic stories
- Produce a short animated film — script to screen
- Learn storytelling structure: heroes, villains and plot twists
- Direct AI like a filmmaker directs a crew

★ **WOW moment:** A mini film premiere — your child screens their own AI movie.

PHASE 4 • WEEKS 10-12 The Smart & Safe Creator Phase

Skills for life, not just for class.

- AI safety and smart digital habits — what to trust, what to question
- Using AI as a learning buddy for school subjects
- Capstone project: one big creation combining everything learned
- Graduation showcase in front of parents

★ **WOW moment:** Certificate ceremony + live showcase where your child presents their work on stage.

WHAT PARENTS CAN EXPECT

- Small batches (max 12) — every child gets personal attention
- Regular progress updates and work shared with parents
- Safe, supervised, age-appropriate use of AI tools at every step
- A certificate and live showcase at completion

Led by Saurabh Singhal — engineer, MBA, and former Analytics Manager with 6+ years of corporate AI experience — who personally teaches every session.

Seats are limited to 12 per batch — and they fill fast.
