

AI SMART KIDS

Ujjain's First AI Institute for Kids

Senior Track Curriculum Guide • Ages 13–16 • 12 Weeks

Your teen already lives in a world of screens. Our 12-week Senior program turns that screen time into real, future-ready skill — where teens stop just consuming content and start building with AI: real apps, chatbots, portfolios and ideas of their own.

Every week is hands-on and project-based. Children work with leading AI platforms — including ChatGPT, Google Gemini and Canva — always guided live by the instructor, always age-appropriate, and always building toward something they can proudly show you.

12 Weeks
structured program

2–3
classes per week

12 Seats
per batch only

100% Hands-on
project based

SENIOR TRACK • AGES 13–16 — "The Teen AI Builder"

A skills-and-projects journey. Teens go deeper — from understanding how AI thinks to building real, working products.

PHASE 1 • WEEKS 1–3 Inside the Mind of AI

Most people use AI blindly. Your teen will actually understand it.

- How AI models really "think" — demystified with live demos
- Comparing today's top AI models: strengths, limits and smart selection
- Spotting AI mistakes, bias and hallucinations like a pro
- Building the mindset of an AI power-user, not a passive consumer

★ **WOW moment:** Your teen explains to YOU how AI works — better than most adults can.

PHASE 2 • WEEKS 4–6 The Master Communicator

The #1 AI skill of the decade: getting brilliant results from AI, on demand.

- Our exclusive in-house prompting frameworks (taught only at AI Smart Kids)
- Advanced techniques used by professionals in top companies
- Applying AI power-skills to studies, exams and projects
- Turning vague ideas into precise, powerful instructions

★ **WOW moment:** A personal "AI playbook" of techniques your teen will use for years.

PHASE 3 • WEEKS 7-9 The Builder Phase

From user to maker — teens ship real, working products.

- Build and launch their own working app — live on a real device
- Create a personal AI chatbot with its own personality and purpose
- Design and publish a simple website/portfolio
- Learn how real products go from idea to launch

★ **WOW moment:** Your teen installs an app on your phone — one THEY built.

PHASE 4 • WEEKS 10-12 The Innovator Phase

Everything comes together in one signature project.

- Capstone: identify a real problem and build an AI-powered solution
- Create a personal portfolio that stands out for schools and beyond
- Present and defend their project — communication and confidence
- Graduation showcase and certification

★ **WOW moment:** A portfolio-ready project your teen can show in any school or college interview.

WHAT PARENTS CAN EXPECT

- Small batches (max 12) — every child gets personal attention
- Regular progress updates and work shared with parents
- Safe, supervised, age-appropriate use of AI tools at every step
- A certificate and live showcase at completion

Led by Saurabh Singhal — engineer, MBA, and former Analytics Manager with 6+ years of corporate AI experience — who personally teaches every session.

Seats are limited to 12 per batch — and they fill fast.
